The climate of the south coast favours the spread of dieback, which thrives in wet soil and can easily be spread in mud or soil that adheres to vehicle tyres or bushwalkers' footwear. Because National Park, including the southern bush rat, western brush wallaby, quenda, several species of small marsupial predators, plus reptiles and amphibians.

Flora in **Eucla National Park** includes common South Australian species that have followed the sea cliffs into WA.

On and near **Mount Ragged**, many species of orchid and several ferns have been identified, together with a small population of the sticky-tail flower (*Anthocercis viscosa*), which previously has only been found near the coast.

Animals found throughout south-west WA inhabit **Cape Arid National Park**, including the southern bush rat, western brush wallaby, quenda, several species of small marsupial predators, plus reptiles and amphibians.

During winter and early spring, whales are regularly spotted off the coastline of both parks. Seals occasionally visit beaches in Cape Arid National Park.

Templetonia retusa, found in limestone rich areas, typically has red flowers that are the reason for its common name of 'cockles tongue', yet it can also be found with pink or yellow flowers.

Temporarily restrict access to certain areas. To avoid spreading dieback when driving in the park, it is essential to keep to established roads and tracks and obey all 'ROAD CLOSED' signs. Bushwalkers can help by cleaning mud and soil from their boots before entering a park or reserve. By washing the tyres and underbody of your car before and after a trip to a park or reserve, you can help preserve WA's natural areas.

Phytophthora dieback is a plant disease caused by a waterborne mould, which is lethal to hundreds of plant species. Dieback kills plants by destroying their root systems and places many of the parks' plant species at risk.

Dieback – help stop the rot

Due to the success of Parks and Wildlife's ongoing *Western Shield* baiting program, which targets foxes and feral cats, the chuditch has been reintroduced into Cape Arid National Park.

Feral animal control

One of the biggest threats to native animals is the European fox. Due to the success of Parks and Wildlife's ongoing *Western Shield* baiting program, which targets foxes and feral cats, the chuditch has been reintroduced into Cape Arid National Park.

Several threatened bird species visit the park including the Australasian bittern, Carnaby's cockatoo and the Cape Barren ground parrot.

Found in southern WA are found here. Sixteen of the 18 species of honeyeater birds, as it protects a broad range of habitats that support more than 160 bird species.

Threatened birds

Cape Arid National Park is an important conservation area for birds, as it protects a broad range of habitats that support more than 160 bird species. Sixteen of the 18 species of honeyeater found in southern WA are found here.

Several threatened bird species visit the park including the Australasian bittern, Carnaby's cockatoo and the Cape Barren ground parrot.

The park is also home to the critically endangered western ground parrot.

Due to the success of Parks and Wildlife's ongoing *Western Shield* baiting program, which targets foxes and feral cats, the chuditch has been reintroduced into Cape Arid National Park.

Information current as at June 2016. Available in alternative formats on request.

Mount Ragged forms part of a threatened ecological community (Russell Range mixed thicket vegetation complexes) and is home to numerous endemic and geographically restricted species including *Scaevola brookeana* and *Gastrolobium tergiversum*. There is also a small population of the sticky-tail flower (*Anthocercis viscosa subsp. caudata*) which previously has only been found near the coast. Cape Arid National Park and Nuytsland Nature Reserve to the east form a continuous protected area reaching from east of Esperance almost to the South Australian border.

Nuytsland Nature Reserve features a mallee landscape north of Wylie Scarp, which marks the start of limestone cliffs that extend eastwards for more than 100km and include the 90m-tall Baxter Cliffs.

Heath-covered sandplain stretches to the east and west of Israelite Bay. To the east, the landscape between the scarp and coastline is broken by a series of salt lakes and clay pans.

Point Malcolm and the eastern group of islands of the Recherche Archipelago can be seen as you drive down Wylie Scarp, just west of Tookaleena Rock and about 25km west of Israelite Bay.

Eucla National Park features 3340ha of mallee scrub and heathland near the Western Australian and South Australian border.

The parks most significant features are Wilson Bluff, a high limestone cliff that provides a vantage point for viewing the spectacular sea cliffs of the Great Australian Bight, and the Delisser Sandhills, which are clearly visible from Eyre Highway.

Cape Arid and Eucla national parks

Israelite Bay/Nuytsland Nature Reserve

Landscape features

Cape Arid National Park, located 125km east of Esperance, encompasses nearly 280,000ha of native vegetation and is best known for its stunningly beautiful beaches, clear blue seas and rocky headlands.

Low granite hills extend inland and in the northern part of the park the jagged Russell Range rises to its highest point at Tower Peak (594m).

Southern sandheaths and mallee extend inland to Mount Ragged, after which the vegetation transforms into woodlands dominated by saltbush and bluebush.

Mount Ragged forms part of a threatened ecological community (Russell Range mixed thicket vegetation complexes) and is home to numerous endemic and geographically restricted species including *Scaevola brookeana* and *Gastrolobium tergiversum*. There is also a small population of the sticky-tail flower (*Anthocercis viscosa subsp. caudata*) which previously has only been found near the coast.

Cape Arid National Park and Nuytsland Nature Reserve to the east form a continuous protected area reaching from east of Esperance almost to the South Australian border.

Visitor guide

Department of Parks and Wildlife

RECYCLE Please return unwanted brochures to distribution points

Things to do and see

Camping

- Bring a portable gas stove for cooking (no solid fuels permitted).
- There is no water provided in the parks. Always carry your own water supply.
- Generator running hours – 8am to 1pm and 5pm to 9pm.

Cape Arid National Park

Unsealed roads lead to campgrounds at Thomas River. Mount Ragged, Jorndee Creek and Thomas Fisheries are accessible by four-wheel-drive vehicle only.

Nuytsland Nature Reserve

Camping is permitted in the Shire of Esperance Israelite Bay Recreation Reserve. Access is by four-wheel-drive vehicle only.

Eucla National Park

No camping is permitted within the park. Facilities are located at Border Village and Eucla Pass.

Fishing

Coastal fishing is excellent all year round. Recreational fishing regulations apply. Ask a park ranger or call the Fisheries WA office in Esperance.

Be aware. The Southern Ocean is unpredictable. Fishing from rocks is extremely dangerous.

Four-wheel driving

Please keep to designated four-wheel-drive tracks to avoid spreading plant disease and causing erosion.

Some tracks may be closed during wet conditions including Telegraph Track, Thomas Fishery Track, Balladonia Track, Pasley Track and Gora Track.

- Some beaches may be inaccessible
- Consider the conditions on the day.
- Remember that beach sand can be treacherous.
- Check tide charts when planning your trip and remember to adjust your tyre pressure.

Contact the ranger for details.

Closest fuel outlet is Condingup (55km from Thomas River campground) or Esperance (180km from Israelite Bay).

Birdwatching

All walks in the park offer good opportunities for spotting birds.

Thomas River campground's banksia woodland is home to many species of honeyeater when banksias are in flower.

Thomas River estuary is home to waterbirds and waders, including pied oystercatchers and crested terns.

Yokinup Bay is a breeding area for hooded plovers.

Poison Creek Road's roadside heath is home to Australian bustards, brown falcons, rufous fieldwrens and southern emu-wrens.

Mount Ragged and its surrounds feature mallee scrub and woodlands, home to malleefowls, mulga parrots, chestnut quail thrushes, shy heathwrens, purple-gaped honeyeaters, yellow-plumed honeyeaters and crested bellbirds.

Historical sites

Cape Arid National Park

Ruins of homesteads, buildings and dams constructed by pioneer graziers in the early 1870s are found around Thomas Fishery and Pine Hill. See gravesites of early travellers near the water hole at Pine Hill and the grave of an early settler in a deep valley near Hill Springs east of Mount Arid.

Nuytsland Nature Reserve

Ruins of the National Trust-classified Post Office and Telegraph Station (built in 1895) are located within the National Trust historical reserve at Israelite Bay.

Eucla National Park

Near the western boundary of the park, the ruins of the Eucla Telegraph Station and original Eucla township are gradually being buried by encroaching sand dunes. These ruins date from the construction of the original transcontinental telegraph line. Ask Parks and Wildlife staff for details.

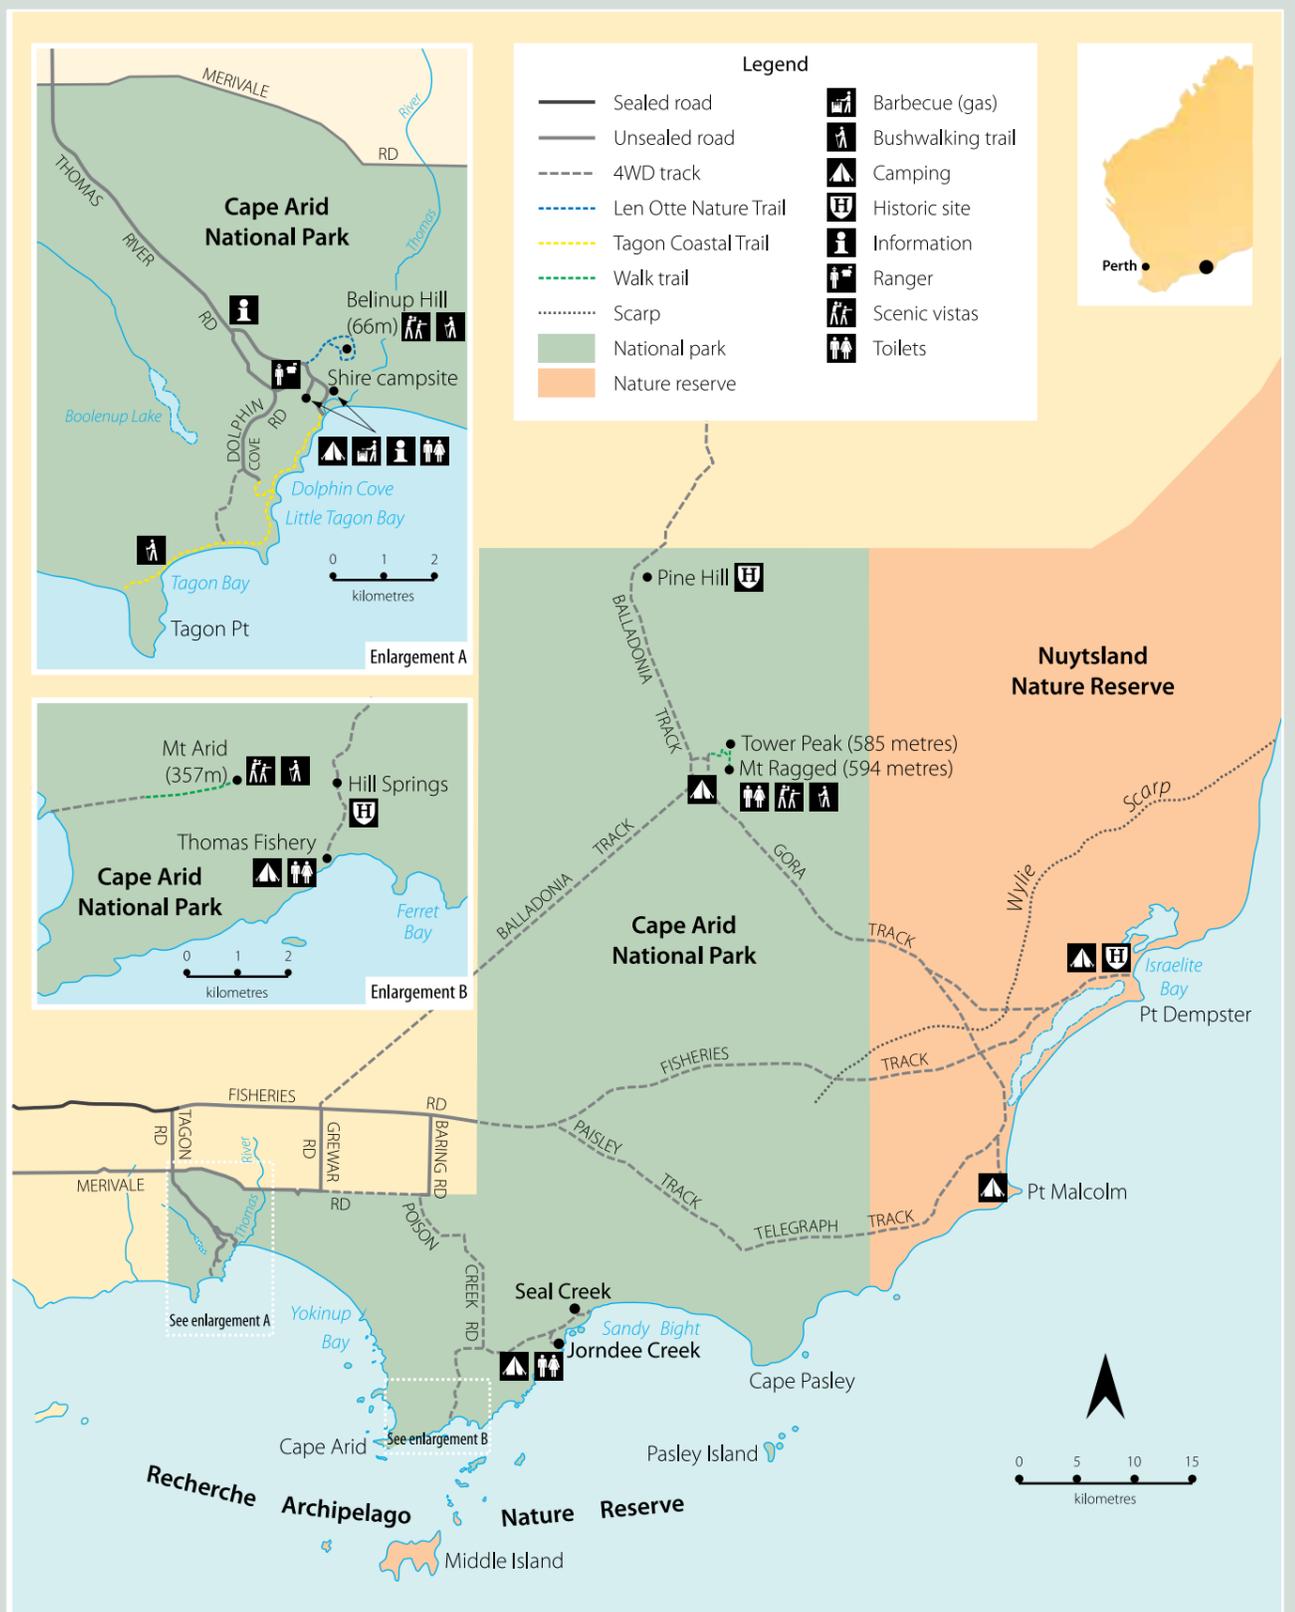

Walking

Bush and beach walks offer scenic vistas and close-up views of the natural beauty of the park. Carry ample drinking water.

Cape Arid National Park

Len Otte Nature Trail – Class 3, 2km return, 1.5 hours

This easy to moderate walk features views over the park and a close look at the varied plant and animal life of the area. Path is well defined and the walk is punctuated with some moderate rises and declines.

Tagon Coastal Trail – Class 4, 10km return, 5 hours

Features views over the wild coastline. Trail covers sections of steep granite which are slippery when wet. In winter, you may spot a southern right whale visiting the bay.

Mount Ragged Walk – Class 5, 3km return, 3 hours

Mount Ragged is a steep-sided ridge surrounded at about one-third height by a wave-cut platform. A difficult walk to the top of Tower Peak (585m). Trail is a tough, steep ascent with the track overgrown in parts. Trail direction markers are limited.

Mount Arid – Class 5, 4km return, 3 hours

A steep granite scramble with limited trail makers. A difficult climb to the summit provides magnificent views of the coastline, Recherche islands and the park's interior landscape. Access is by four-wheel drive only along the beach during suitable tide and swell conditions.

There are no formal walk trails in the western section of Nuytsland Nature Reserve or Eucla National Park.

Trail classifications

Class 3 Moderate trail with clear directional signage. You may encounter minor natural hazards such as short, steep sections, steps, shallow water crossings, and unstable or slippery surfaces. A good level of fitness is recommended.

Class 4 Limited directional signage and difficult sections. You may encounter natural hazards such as long steep sections, water crossings, and unstable or slippery surfaces. A good level of fitness and bushwalking experience is recommended.

Class 5 No directional signage and very difficult sections. You may encounter natural hazards such as long, steep sections and climbs, water crossings, and frequent unstable or slippery surfaces. Only very fit and experienced bushwalkers should attempt.
